Various clerical, factory and night club jobs between 1991 and 2000

## Programming Language Experience:

I first programmed in 1983 in Sinclair BASIC 48k, have used several 8bit and 16bit BASIC languages with exposure to assembler, C, Pascal and Cobol. Java became my first modern language in 2000 and has remained a fluent tool of mine through out my degree, hobby and freelance programming career having developed several client/server style systems, XML enabled applications and GUIs design and development. Other modern languages I have become experienced with include C++ and VB.

I first learnt VB some 5 years ago and recently have been using the language with Visual Studio 2005 to implement a project for a small UK company. I am currently studying VB.Net at NDAI on the IT Software Professional Course. I find VB.Net a very intuitive language in its recent form and I found the transition from Java to VB straight forward and rapid.
